Education

Dec. 2016 **Ph.D. Physics**, *Stony Brook University*, Stony Brook, NY

Aug. 2009 **B.S., Physics**, *Rensselaer Polytechnic Institute*, Troy, NY
Mathematics minor, Magna Cum Laude, GPA 3.87

Experience

2018- **Talent**, *Mindfire Global*

Was one of 36 “talents” chosen out of hundreds of applicants to participate in the inaugural Mindfire mission in Davos, Switzerland. Mindfire (mindfire.global) is a new program which brings together top talents in artificial intelligence, neuroscience, and biology to brainstorm new ways of creating biologically inspired AI.

2018- **Assistant Research Scientist**, *University of Maryland, College Park*

Working with Prof. Peter W. Chung and Prof. Mark Fuge. My research at UMD has covered several different thrusts of exploration:

- Targeted lead generation - research on deep learning architectures for molecular generation and optimization (variational autoencoders, generative adversarial networks)
- Molecular property prediction - using custom molecular featurization techniques and machine learning models to predict the properties of energetic molecules. (ridge and LASSO regression, kernel ridge regression, neural networks, random forest models)
- Structure-property relationships - methods of interpreting machine learning models to discover molecular structure-property relationships. (model sensitivity analysis, feature importance ranking)
- Natural language processing - currently supervising a masters student and two undergraduate students who are working to identify chemical names in large collections of pdfs. Goal is to do word embeddings with chemical names to identify chemicals with particular properties and functionalities.

2017-2018 **Postdoctoral Associate**, *University of Maryland, College Park*

Feb-Apr **Tutor**, *Schenectady County Community College*

- Tutor in the Learning Center for physics, chemistry, and math.

2012-2016 **Graduate Research Assistant**, *Stony Brook University*

Ph.D. adviser: Prof. Marivi Fernández-Serra

- Wrote thousands of lines of code in Python and Fortran for quantum molecular dynamics simulation, analyzing molecular dynamics trajectories, and fitting spectra. Parallelized code with MPI.
- Planned and executed a detailed study of the dielectric spectra of water which led to the discovery of optical phonon-like modes in liquid water.
- Ran molecular dynamics simulations with thousands of molecules on HPC clusters.
- Wrote the *spectrumfitter* Python package for fitting dielectric spectra.

2010-2012 **Graduate Teaching Assistant**, *Stony Brook University*

2010 **Summer Internship**, *Los Alamos National Laboratory*

- Worked with Dr. Garrett Kenyon on biologically-inspired neural networks for computer vision.

2009-2010 **Graduate Teaching Assistant**, *Rensselaer Polytechnic Institute*

2008-2009 **Undergraduate Research Assistant**, *Rensselaer Polytechnic Institute*

2008 **Summer Research Experience for Undergraduates**, *Stony Brook University*
