Aug. 2009 **B.S., Physics**, *Rensselaer Polytechnic Institute*, Troy, NY  
Mathematics minor, Magna Cum Laude, GPA 3.87

## Recent Experience

2017- **Postdoctoral Associate**, *University of Maryland, College Park*

Working with Prof. Mark Fuge and Prof. Peter W. Chung studying applications of machine learning to molecular design and discovery. My research has covered several different thrusts of exploration:

- Targeted lead generation - research on deep learning architectures for molecular generation and optimization (variational autoencoders, generative adversarial networks)
- Molecular property prediction - using custom molecular featurization techniques and machine learning models to predict the properties of energetic molecules. (ridge and LASSO regression, kernel ridge regression, neural networks, random forest models)
- Structure-property relationships - methods of interpreting machine learning models to discover molecular structure-property relationships. (model sensitivity analysis, feature importance ranking)
- Natural language processing - currently supervising a masters student and two undergraduate students who are using NLP techniques to identify keywords in scientific documents and extract chemical names. Exploring word embedding techniques and sentence parsing to identify chemicals and their properties. (TF-IDF, word clouds)

Feb-Apr **Tutor**, *Schenectady County Community College*

- 2017
  - Tutor in the Learning Center for physics, chemistry, and math.

2012-2016 **Graduate Research Assistant**, *Stony Brook University*

Ph.D. adviser: Prof. Marivi Fernández-Serra

- Wrote thousands of lines of code in Python and Fortran for quantum molecular dynamics simulation, analyzing molecular dynamics trajectories, and fitting spectra. Parallelized code with MPI.
- Planned and executed a detailed study of the dielectric spectra of water which led to the discovery of optical phonon-like modes in liquid water.
- Ran molecular dynamics simulations with thousands of molecules on HPC clusters.
- Wrote the *spectrumfitter* Python package for fitting dielectric spectra.
